Request for Download

Annotated and Translated Disassembled Code (@DisCo) is a graph based datastore designed by researchers at Idaho National Laboratory to organize firmware and software analysis data across builds, packages and systems, providing a highly scalable platform enabling automated binary software analysis tasks including corpora construction and storage for machine learning.

This form provides additional protocol for the release of the @DisCo software to partners and other cybersecurity defenders. To request a copy of @DisCo, please fill out the following form and email it to agradmin@inl.gov.
